Assessment of the study results

Skin tolerability

The test product **Dr. Baby Diaper Size 5** was applied several times a day onto the diaper area over a period of fourweeks by 20 subjects. From the clinical-dermatological perspective no relevant skin reactions arose, the product was tolerated very well. Neither intolerance reactions in terms of skin irritation nor allergic reactions (contact dermatitis) were detected.

Accordingly, from the dermatological point of view, the tested product **Dr. Baby Diaper Size 5** exhibits no high potential for skin irritation and sensitization, when used as intended.
